ColorDesigner PLUS v3.6 - Patch 10

Contents of Patch

Patch 10 includes the following updates:
- Streamlined the database update system further by compressing the version-independent file format.

Patch 10 also includes everything in Patch 9:
- Streamlined the database update system by adopting a version-independent file format.

Patch 10 also includes everything in Patch 8:
- Corrected a problem where CD PLUS would close unexpectedly at launch.

Patch 10 also includes everything in Patch 7:
- Added the capability to have characters from non-Western European languages in color matching databases.
- Updated the web service addresses used for software registration and activation, so they will not be cached by third party services. This enables IT organizations to configure their security software to allow network traffic to these URLs, without the URLs changing in the future.

Patch 10 also includes everything in Patch 6:
- The CD PLUS settings file is automatically backed up daily. If the active settings file becomes corrupted, the X-Rite support team can quickly guide the user to find the most recent backup and restore it.

Patch 10 also includes everything in Patch 5:
- The automatic update system is now more robust for retail chains.

Patch 10 also includes everything in Patch 4:
- Improved the ability to share an instrument with other software applications. In particular, CD PLUS previously would not release the instrument connection after launch.
- Added support for Ci52 OEM instrument models, including the ability to enable/disable a transform embedded in the instrument.
- Corrected a dispenser setup issue: when a newer version of the FAST & Fluid Management IDD was installed, CD PLUS would not detect its presence and would display an error message. This error has been corrected.
- The dispense log file was renamed to "DispenserLog.txt", and the date/time written to the log represents the beginning of the dispense, not its completion.
- Added Polish language translations for the CD PLUS help files.

Patch 10 also includes everything in Patch 3

- Improved the ability to share an instrument with other software applications. In particular, CD PLUS previously would not release the instrument connection after checking for a firmware update.

Patch 10 also includes everything in Patch 2
- Added Polish language translations for the CD PLUS application.
- Added Romanian language translations for the CD PLUS application and the help files.
- Added Dutch language translations for the help files.
- Updated dispense logging so no log entry is created until after a successful scan of the base barcode (when a base scan is required).

Patch 10 also includes everything in Patch 1:
- Corrected a problem where scheduled updates would not initiate.
- Resolved issues in which the user settings for scheduled updates were ignored.
- Updated the automatic update notification dialog so it always appears on top of the CD PLUS window.
- Eliminated the creation of duplicate entries in the dispense log.

Installing the Patch

1. Download the patch and unzip it. Double click CDPPatch.exe to start the installation.

2. During the installation, you will see the following window. Wait for the installation to finish.

3. When the installation is finished, click **OK**.
