Color Management Solutions

NetProfiler 3.0

The universal standard in
color measurement instrument verification

x·rite

A measure of excellence everywhere you need it

No matter what products you produce, you are always in the business of meeting high standards. Color consistency is a critical part of this equation. A product that does not pass the eye test is often the main difference between keeping or losing a customer.

You've invested in the people and the equipment to produce quality color products. And now you have the technology to ensure they all work in harmony: X-Rite NetProfiler 3.

NetProfiler 3 is a one-of-a-kind solution: an easy-to-manage system for performance verification and adjustment. Incorporated with your color management program, NetProfiler 3 provides a measurable edge in color monitoring and consistent product appearance.
NetProfiler 3 is the only performance assurance system to offer true instrument synchronization

An essential link — from in-house quality control to remote site color monitoring

Consider how accurate color matters in your operation. A brand image. A hue or shade unique to your product. Components produced at different locations that have to match when assembled. Competing as part of a global supply chain.
A stable, repeatable color management program resolves these issues, from in-house materials analysis to on-line testing, to finished product QC.

NetProfiler 3 is the only performance assurance system to offer true instrument synchronization, linking your spectrophotometers through software that creates a complete, embedded profile for color monitoring anywhere in your manufacturing or supply chain.

Color Network Un-Profiled
Shift during usage (age, soiling, etc.)

Profiled to X-Rite Standard

Here are just a few of the immediate benefits

- **True linking of all instruments.** X-Rite's patented technology is the only available solution that creates a true connection to enhance accuracy and consistent performance.

- **Profile reliability.** NetProfiler 3 produces a digital signal to acknowledge accurate measurements as well as a traceability stamp for verifying instruments and process equipment conformance.

- **Supports region-to-region operations.** In cases where products or components are produced for assembly or sale in other countries, NetProfiler 3 allows for establishing uniform standards that works for everyone in your supply chain.

- **Expands opportunities.** NetProfiler 3's versatility gives everyone involved in the manufacturing process an opportunity to compete for business.

**The ideal color assurance solution
for a wide range of industries and applications**

NetProfiler 3 is a versatile verification package that brings color conformance in line, and on-line, for industries that include:

- **Automotive:** Establish color standards for paint manufacturers and finishers; provide a consistent profile for specifiers, and supply chain.

- **Packaging:** Ensure color consistency throughout an operation — designer specs, ink/ material selection, printing, prepress, brand management verification.

- **Retail Paint:** Create accurate palettes for reproducing specialty colors and blending new colors; provide downloadable profiles to outlets for on-site mixing consistency.

- **Textiles and Soft Goods:** From wearable materials to fabrics for home furnishings, develop repeatable standards for sourcing, specifiers, dyeing operations, cut and sew, wash testing, and each element of a supply chain.

- **Plastics:** Measure color consistency in color concentrate, master batches, processes, and on-line QC

- **Paint and Coatings:** Ideal for streamlining product development and verification, for reliability testing, and for specifiers, manufacturers, and finishers

- **Digital Supply Chain:** Connect and direct compliance monitoring, via shared profiles and real-time adjustments.

Your choice — right from the beginning

The colors you use are your identity. The technology you use to protect that identity should be your choice as well.

NetProfiler 3 accommodates most any type of operation — from small, individual suppliers to multi-site manufacturers. You can use it simply to tune or calibrate devices, to establish a color standard for a specific product or assembly, or to manage color consistency from incoming materials to on-line production. The ability to embed profiles allows you to maintain a consistent color program throughout a supply chain, including those that span different regions and countries.

A model of performance

No matter how precise an instrument or a QC program, its success depends on its consistency. NetProfiler 3 insures repeatable performance through patented technology that links your color measurement devices in a system that allows you to set specific conformance standards and verify them on-line.

Technical Basics

Intel Core 2 duo, AMD Athlon II or higher Processor; 2 Ghz or higher CPU Speed; 2 GB or higher RAM; Windows® 7 [both 32 and 64 bit versions], XP Professional SP3 OS; 5 GB free space on system Hard Disk; 24X speed or faster CD; XGA [1024 x 768] 32 bit True Color Support for OpenGL Video Adapter; 1 Serial or USB port for each connected instrument; Internet and E-mail recommended for data transfers, software updates, and technical support

NetProfiler 3 supports:

Benchtop Models

- Color i5
- Color i7
- CE-7000A
- SF-600 Series

Handheld Devices

- SP62, SP64, 962, 964
- SpectroEye
- Ci52

Performance Check

- CF57
- RM400

A Full Line Of Color Matching Solutions

X-Rite is a world leader in color measurement, management, and communication technology for industries and applications that reach around the globe. We provide the expertise and know-how to make the most of your color opportunities...right from the start.
