

ColorDesigner PLUS v2.1 - Patch 6

Contents of Patch

Patch 6 includes fixes for the following bugs:

- Under certain conditions, fandeck or formula book database updates would fail to install. With Patch 6, these databases install correctly.

Patch 6 also includes everything in Patch 5:

- A side effect of Patch 4 was that Color Lookup took more time to complete a search. This has been corrected.

Patch 6 also includes everything in Patch 4:

- In Color Lookup, some fandeck colors were omitted from the list. They are now included.

Patch 6 also includes everything in Patch 3:

- In Color Match with some color matching databases, the base ID displayed on screen would change after completing the match. The color would tint correctly, but the paint product would be incorrect (e.g. different sheen).

Patch 6 also includes everything in Patch 2:

- With some Color Matching Databases, when a formula was saved to Customer Files, the wrong base would be displayed. This affected Color Matching Databases in which the product was not the last selection in the menu flow. The issue occurred in Color Match and Manual Entry. Note that the correct base was saved in Customer Files.

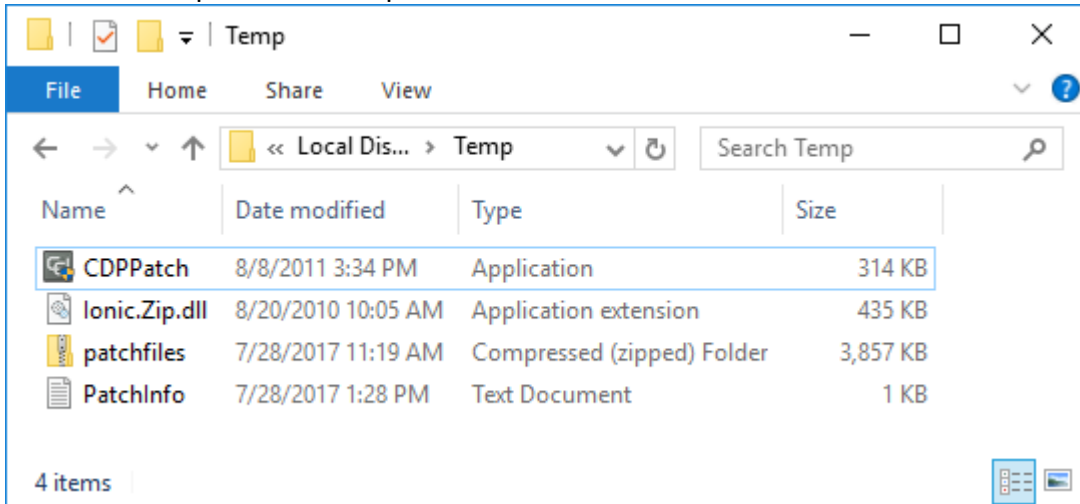

Patch 6 also includes everything in Patch 1:

- When certain Customer File formulas were deleted, other formulas in the same paint product would appear to be deleted also.
- For Paint Lines created in Color iMatch, the colorant load setting (fixed vs. minimum) is now used correctly in CD PLUS.

ColorDesigner PLUS v2.1 - Patch 6

Installing the Patch

1. Download the patch and unzip it. Double click CDPPatch.exe to start the installation.

2. During the installation, you will see the following window. Wait for the installation to finish.

3. When the installation is finished, click **OK**.
