W80 Series

Overview
The W80 Series includes the best equipment in color matching, the MatchRite iVue, a versatile non-contact spectrophotometer with dual aperture sizes of 6mm and 12mm. It is revolutionary in its ability to measure almost anything, including wet paint samples and large bulky objects. This easy-to-use spectrophotometer increases in-store uptime, while reducing service cost and overall cost of ownership. X-Rite’s ColorDesigner PLUS color matching solution is also included in this product bundle.

Key Benefits
The W80 Series represents the latest in top-of-the-line paint matching. The included non-contact spectrophotometer can measure a variety of sample sizes, shapes, textures, and opacity levels, making the customer paint-matching experience faster and more accurate, and keeping customers coming back for more.

- The W80 series product bundle from X-Rite is designed expressly for point of sale applications with simplified color searches and matching.
- The MatchRite iVue features unique Active Visual Targeting for precision measurements to take the guesswork out of the color measurement process.
- It features switchable large and small measurement spot sizes with the click of a button and no need to recalibrate between the two.
- The non-contact spectrophotometer measures 1.5 inches from the sample surface, keeping lenses clean, free of wet paint, and reduces service costs over the life of the instrument. It speeds up the color matching process, delivering the ultimate customer experience and making counter staff more productive than ever before.
- ColorDesigner PLUS expedites and refines the paint selection process, eliminating needless formulation errors, and it connects to any paint dispenser system.

“Since we’ve gotten the iVue, we’ve been able to match those most difficult dark colors to about 95 percent accuracy. For light colors, it’s just phenomenal. I’d say almost 100 percent. It’s unbelievable how good this instrument is compared with the old style.”
